Benefits of training at the Bangkok Training Center

Visual
databases built
to meet training
needs at no cost
to the airline

All RealitySeven simulators
equipped with scenting cues
– including volcanoes,
electrical fires and
air-conditioning fumes.

All Full Flight Simulators
are equipped with
remote iPad iOS.

All Full Flight Simulators offer
enhanced debrief stations.

All Full Flight Simulators are
equipped with 4Mp LED visual
projection systems with 200+
X 45+ degrees field of view
which far exceeds regulatory
requirements in the critical
areas of light point resolution,
brightness and runway
recognition at range.

Acron Aviation Bangkok Training Center

The Bangkok Training Center offers airlines a purpose-built training facility where innovation, training, and technology have been combined to ensure maximum aviation safety while maintaining a high level of regulatory compliance.

Operating since 1996, The Bangkok Training Center is a world-class provider of ATR, Airbus A320, and Airbus A330 pilot and maintenance training and is well placed to fulfill wet and dry lease training requirements.

The state-of-the-art training facility offers a modern, fully equipped training environment including a range of training devices and systems compliant to EASA, Thai CAAT, and a multitude of other national aviation authorities.

Combined with a long-standing history training cadets, pilots and developing the latest pilot training systems, The Bangkok Training Center provides the airline industry with a vast experience resulting in the highest quality of training.

Situated at the
southern end of
Bangkok Suvarnabhumi
International
Airport

Facilities

The Bangkok Training Center has been purpose-built to meet the pilot training needs of today's airlines while also offering pilots a comfortable environment where they can most effectively develop their knowledge and skills.

The integrated range of training devices available includes a wide range of Full Flight Simulators as well as lower level devices such as Flat Panel Trainers making the delivery of training more efficient, saving both time and costs for airlines.

The facility has numerous classrooms, computer-based training rooms and briefing/debriefing rooms extra amenities include an instructor's office, customer lockers, and various lounge areas.

Training Services

L3Harris doesn't just offer world-class pilot training. Their knowledge in developing and utilizing flight training technology dates back to almost 90 years, and today L3Harris is a world leader in the development of pilot training and aircraft maintenance training systems, ranging from tablet-based tools to high fidelity Full Flight Simulators, all which can be found in L3Harris and airline training centers around the world.

All flight safety training devices at AATC are multi-configurable and can be readily configured to reflect just about any airframe/engine/avionic combination required to ensure pilots receive the most enhanced training experience.

L3Harris are recognized worldwide as experts in the profession of training airline pilots:

- > Our commitment to excellence is the hallmark of our company and one which has achieved global recognition from airlines and regulators alike
- > Our instructors, whether Airline Training Captains delivering Type Training or teaching foundation flying skills, are all highly-trained, dedicated aviation professionals. They are selected for their enthusiasm and ability to transfer their considerable knowledge, skills, and experience
- > Our dedicated customer support teams at each of our Training Centers complement the delivery of an excellent training experience in pilot training

Maintenance Training

B1 Mechanical Course

The Mechanical Course aims to provide trainees with an in depth knowledge of the Airframe, Engine, Electrical and Avionic LRU's Systems. The theoretical training is in accordance with Part-66 Appendix III.

B2 Avionic Course

The Avionic Course aims to provide trainees with an in depth knowledge of the Electrical, Instrument, Autopilot and Radio/Radar Systems and basic knowledge on the required aircraft and engine systems the theoretical training is in accordance with Part-66 Appendix III.

Engine Run Up Course

The Engine Run Up Course aims to provide trainees competence in practical Line and Base Maintenance, using a structured learning process. The training will be conducted in a simulator and the classroom. This course is aimed at EASA Part-66 category B1 or other maintenance staff who have completed the appropriate theoretical course on relevant aircraft type and previous practical experience of aircraft/engine of comparable construction and system.

Your Visit

One of the most frequent visited cities in the world, Bangkok is home to a warm and welcoming array of culture, plenty to do whatever the season.

Thailand's capital has something to offer everyone. From the city center, you are within a stone's throw of ornate temples, royal palaces, shopping malls, the Chao Praya river, flower markets and much, much more.

Prior to your arrival, the customer care team will be able to assist you with immigration documents and provide assistance in obtaining your visa as well as hotel and transport reservations throughout your time training in Bangkok.
